

Websites

Need a website?

There are too many options available, and yet finding someone to help you with your site can be difficult.

ITNMC has a focus on developing websites simply and quickly. ITNMC specializes in Content Management Systems (CMS) that allow website owners to focus on the text and content of their website instead of tedious items such as updating links, navigation, and changing same piece of information on 20 different pages. CMS makes these mandane and time consuming tasks automated.

Let ITNMC give you more than just a website, give your website the option of changing the look and feel with a click of the mouse while retaining all your content such as contact information, articles, "about us" pages and so forth.

ITNMC can also help with obtaining a domain name, setting up your email accounts, and provide hosting solutions.
